

ECOSYSTEM API

Equus Ecosystem Glossary

The **Equus Ecosystem Glossary** contains an alphabetical list of standardized terms used within the Equus Ecosystem, along with a description or definition of those terms. This glossary provides an explanation of the intended meaning and usage of Ecosystem-related terms and the data, concepts, and processes associated with them.

Vendor ID	3

Consistency is Key

The primary objective of this glossary is to ensure consistency across the Ecosystem documentation. In addition, understanding the Ecosystem terminology will help remove confusion and facilitate better comprehension of the topic.

Terminology A-to-Z

The following are listed alphabetically to help access a specific term quicker and easier.

Assignee

The client's employee who is going on assignment, being relocated, or otherwise requires mobility-related services.

AssignmentPro Instance Id

A unique identifier (in UUID/GUID format) associated with a client's AssignmentPro instance. This value must be included in all Ecosystem data flows.

Business Portal

A dashboard that provides HR, HR business partners, and business users a flexible and interactive way to view and manage information.

Cancellation

A dashboard that provides HR, HR business partners, and business users a flexible and interactive way to view and manage information.

Case

See Service Order.

Client

The AssignmentPro user or company doing business with the service provider.

Data Set

The collection of data fields and document types that could be transmitted as part of Ecosystem integrations between AssignmentPro and a service provider's system. There are three types of data set within the Ecosystem:

- The "Recommended Service" data set contains the fields that Equus considers the best-in-class set for a service type that is supported by AssignmentPro's standard configuration.
- The "Service Provider-Agreed" data set presents the fields a service provider has agreed to exchange with any client using AssignmentPro.
- The "Client/Service Provider-Agreed" data set represents the fields that a service provider has agreed to exchange with a specific AssignmentPro client.

Equus Ecosystem

A web-based platform that drives the assignment lifecycle by connecting service providers, vendors, partners, and key stakeholders in one central system (AssignmentPro) to provide automated exchange of data, end-to-end visibility, streamlined processes, and improved assignee experience.

EPIC

Scripting language for interacting with the AssignmentPro Vendor Integration API. EPIC stands for the Equus Protocol for Inter-process Communication.

Equus Hub

A central component of the Equus Ecosystem, which coordinates connections and the exchange of information between Ecosystem-connected service providers and their AssignmentPro instances.

For all Ecosystem data flows, the Equus Hub validates the associated **Vendor Id** and **AssignmentPro Instance Id** and utilizes them to ensure the data flow is routed correctly.

Follow-Up

An update about the service order sent to the service provider from AssignmentPro. Data flows from the client to the service provider.

Global Mobility

The industry of moving employees on assignment to offices, business, and organizations in different locations worldwide. It involves tasks and activities needed to initiate, manage, and complete the relocation of an assignee, smoothly and successfully. This function supports temporary assignments, relocations, and permanent moves, which could be domestic or international. And in some cases, the mobility requirement includes business travelers.

Initiation

See Service Order.

Instance

An instance is an AssignmentPro site. A client may have multiple instances. Most clients have sites for test and production, at a minimum.

A service provider can be connected to multiple instances if they are integrated with multiple clients, but the instance itself is an AssignmentPro site that is connected to the Hub.

Landing Experience

See Business Portal.

Milestone Update

A milestone update is the information a service provider sends back to AssignmentPro when making or submitting updates about the:

- Delivery status of the service, including who to contact at the provider about the service
- Detailed information about the service being provided

Data flows from the service provider to the client.

Mobile Employee Experience (MEE)

An intuitive, easy-to-use portal where an employee can check the status of their assignment/relocation and related tasks (through updates received via the Ecosystem) and manage activities.

Mobility Team

The client's in-house team that manages the company's global mobility program.

Permission Set

A set of read, write, insert, and update permissions on tables and fields within AssignmentPro. These define what a service provider can and cannot do to specific data in AssignmentPro. These sets are generally standardized by service type.

Service Detail Record

A record of information that captures details about a service being delivered. For example, a record that describes a:

- Work permit being procured by an immigration service provider
- Tax return being prepared by a tax service provider
- Booking for temporary lodging
- Housing rental contract

Service Order

A collection of data in AssignmentPro that forms the basis of communication with a service provider. The methods of communication include the initiation or ordering of services and changes to and cancellation of service requests. A request for services, initiated via a service order,

may be called a case, move, engagement, or another name within the service provider's system.

The **AssignmentPro Service Order ID** should be associated with the case in the service provider's system to facilitate ongoing communication via the Ecosystem.

Service Provider

A company that the client has contracted with to provide one or more of a variety of mobility-related services (e.g., immigration, tax, temporary living, training and orientation, and others) for their mobile employee population.

Vendor

Vendor means the same as service provider. It is used as a system term within AssignmentPro.

Vendor ID

A unique identifier (in UUID/GUID format) associated with a service provider's system. This value must be included in all Ecosystem data flows.

SUMMARY

Rich data, combined with innovative technology tools, helps connect the entire mobility value chain of HR, Talent, Reward and vendor systems to facilitate the seamless management of a company's global workforce. Through the Equus Ecosystem, the entire business has visibility into the move status, compliance, costs and program demographics—all consolidated with performance, KPIs, and employee skills and experiences.

Harness the power of connectivity to simplify the mobility process, gain strategic insights, and enhance the employee experience with the Equus Ecosystem. Global Mobility. Connected.

ABOUT EQUUS

Equus Software is the global leader in cloud-based international relocation and mobility solutions. More than 300 organizations around the world rely on Equus tools and technology to automate mundane, transactional work so that global mobility teams, talent management professionals and other key stakeholders can focus on adding value to the business. Founded in 1999, Equus has a proven track record for delivering cutting-edge talent mobility solutions, continuous innovation and exceptional customer service.
